RfI # 3

Good morning,

The following questions were submitted into the RFP. Please see the below answers:

Question:

During the contractors walk-through, it was stated all abatement will be by National Grid. Reviewing the Hazardous Materials Inspection report from Sienna, dated January 24, 2019; the report shows asbestos-containing materials in many 1st floor areas Auditorium, Women's Room, corridors, etc...;

1. We ask to confirm all items covered in the Sienna report are under National Grid's Abatement
2. Is there an expected completion date of this abatement work?

Response:

1. National Grid will provide abatement of all hazardous containing materials per Sienna's Report
2. An abatement schedule has not been developed. Once an abatement contractor is selected by National Grid, the schedule will be developed. It is anticipated that all abatement will be completed prior to construction beginning.
